

DUMMY PROBES AND HEADERS

Probing blind puts your equipment at risk.
Don't get stuck – dummy probe first!

Pre-probe boreholes with A.G.O.'s dummy probes to find obstructions and sticking points before sending down your expensive equipment.

If the dummy probe gets stuck, the quick-release dummy header will disconnect from the probe with a yank to recover the cable and leave the dummy probe in the hole.

Operators can record the depth of the obstacle and then only probe through the safe section of the borehole to limit risk of losing the instrument.

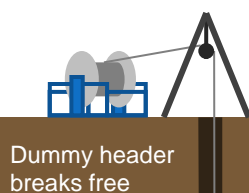

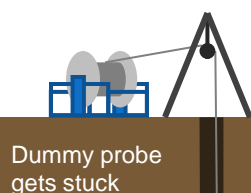

Standard A.G.O. dummy probe

Overall dimensions*	30"L x 1.25"OD
Weight	~10 lbs

Header designed for use with 1/8" wire line

* Other lengths or diameters possible on request

Not to scale
